EDUCATION

Mapua Malayan Colleges Laguna

2022 – 2026

Bachelor of Science in Computer Science, Specialization in Data Science and Analytics

EXPERIENCE

Data Analytics Intern — STMicroelectronics

May 4, 2026 – August 7, 2026

- Developed 4 Power BI dashboards for Finishing and Test operations, automating manual Yield and PPM reporting and enabling analysis of 2 years of manufacturing performance data.
- Investigated reporting discrepancies against engineers' reference reports, identified an incomplete source dataset, integrated additional data, and applied product-level process filters to improve reporting accuracy.
- Analyzed defect-rate and yield trends across manufacturing stages and collaborated with engineers and supervisors to translate operational requirements into reliable performance reporting.

PROJECTS

U.S. DOT On-Time Performance Analysis | Snowflake, SQL, Power BI

- Analyzed 757,673 U.S. flight records using SQL to evaluate delays, cancellations, diversions, and performance trends across airlines, airports, months, and departure periods.
- Defined and calculated operational KPIs including departure and arrival delay rates, cancellation and diversion rates, average delay severity, and delay-cause contribution.
- Developed an interactive Power BI dashboard highlighting a 24.06% peak monthly departure-delay rate, elevated evening delay risk, and significant differences in airline and airport reliability.

WHO Global Disease Outbreak Analytics | AWS, PySpark, Redshift, Power BI

- Analyzed 3,500+ WHO disease outbreak records to identify patterns and trends across diseases, countries, and time periods, presenting findings through Power BI visualizations.
- Built a PySpark ETL pipeline in AWS Glue to clean and transform raw WHO data, loading curated datasets into Amazon Redshift for analytical reporting.
- Automated weekly data pipeline execution with CloudWatch monitoring and failure alerts to maintain data availability for reporting.

Airbnb NYC Analytics Dashboard | Snowflake, SQL, Power BI

- Analyzed 41,697 Airbnb listings to identify neighborhood-level patterns in listing volume, pricing, and room type distribution across New York City.
- Loaded and modeled Airbnb data in Snowflake, creating a structured analytical layer for reporting and exploration.
- Developed a multi-page Power BI dashboard with 8+ visualizations and interactive filters for neighborhood, room type, and price category.

Stock Price Analytics Pipeline | Databricks, Delta Live Tables, Snowflake, Power BI

- Built an analytical data model using fact and dimension tables to support historical stock performance analysis across multiple tickers.
- Developed Bronze → Silver → Gold data transformations using Databricks Delta Live Tables and loaded curated datasets into Snowflake for BI reporting.

SKILLS

Analytics: SQL, Power BI, DAX, Power Query, Data Analysis, Data Visualization, Data Modeling

Data & Cloud: Python, Pandas, PySpark, Snowflake, AWS Glue, Amazon Redshift, Databricks, ETL

Tools: Git, GitHub

CERTIFICATIONS

Google Data Analytics Professional Certificate | Python for Data Science, AI & Development | Google Cloud Computing Foundations
